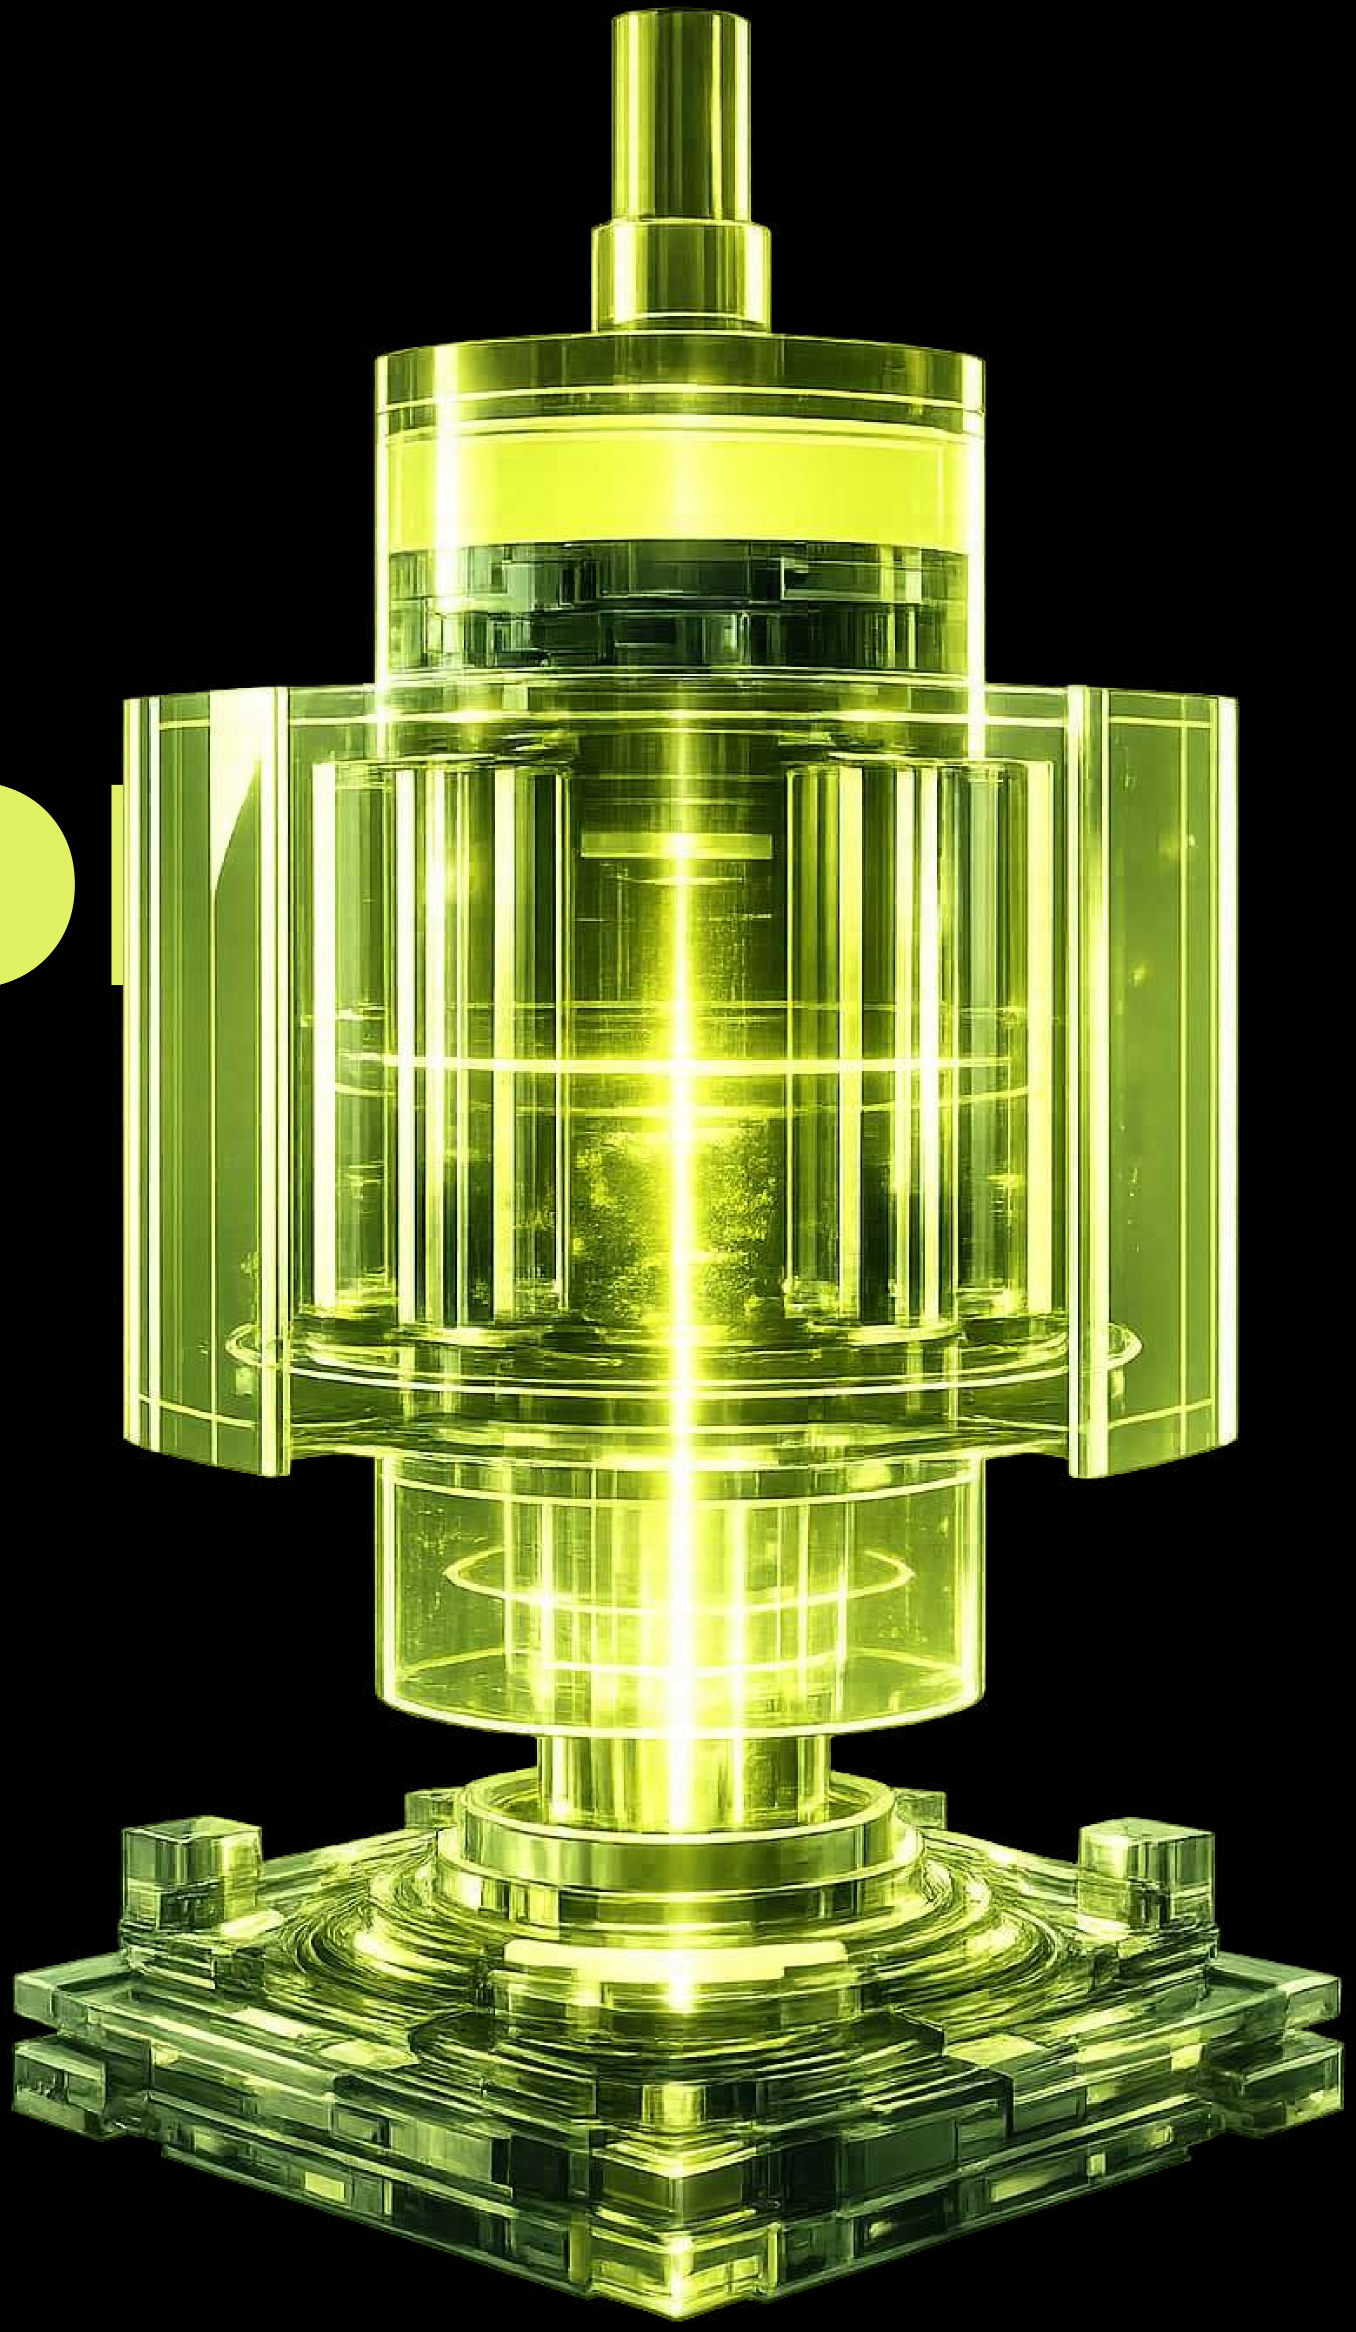
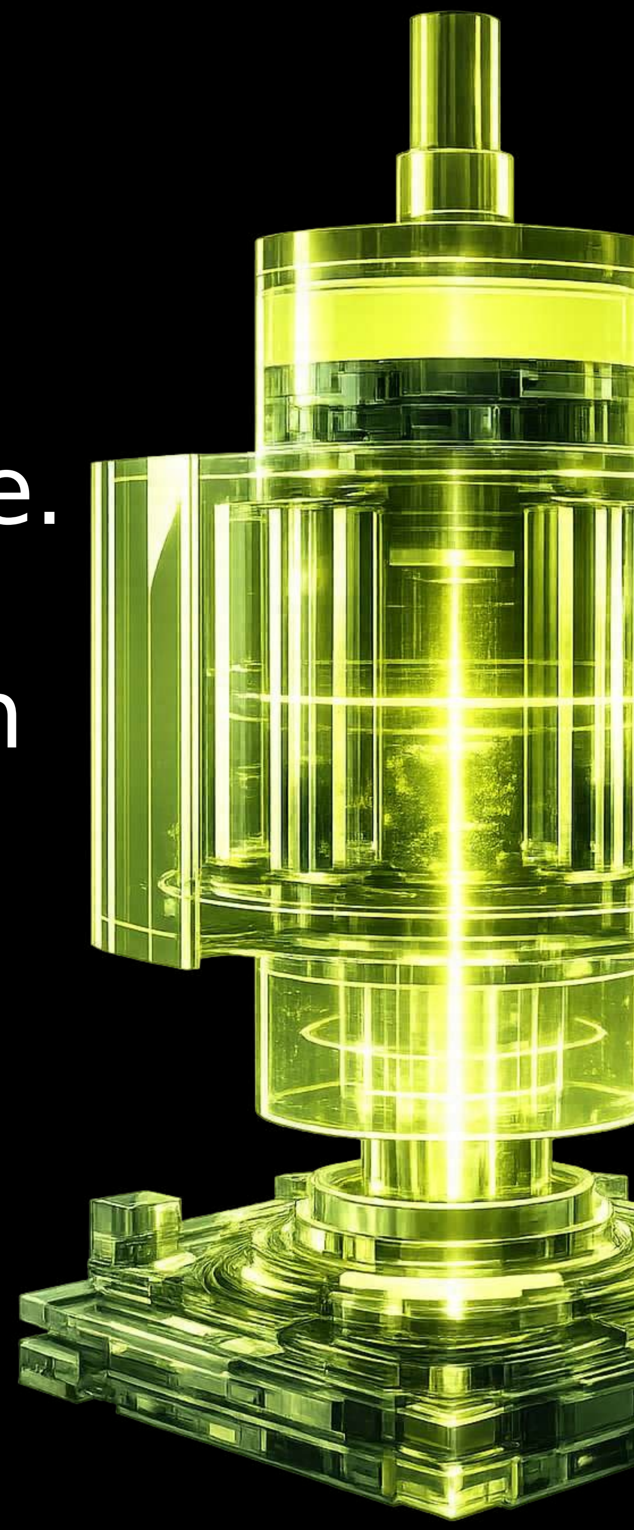
Trade Execution Engine

Cloud-based infrastructure for continuous and automated market execution



KYRR.IO

Redefining Trade Execution with Cloud-Native Infrastructure



Kyrrio’s trade execution engine is now available as a cloud-based infrastructure service.

Previously offered through limited and bespoke arrangements, this execution layer can now be accessed by a broader range of participants at flexible scales.
The engine operates continuously on a cloud-native architecture, enabling automated and parameter-driven execution without manual intervention.

Users can access Kyrrio’s execution cloud based on their operational needs, scaling usage according to predefined execution parameters.

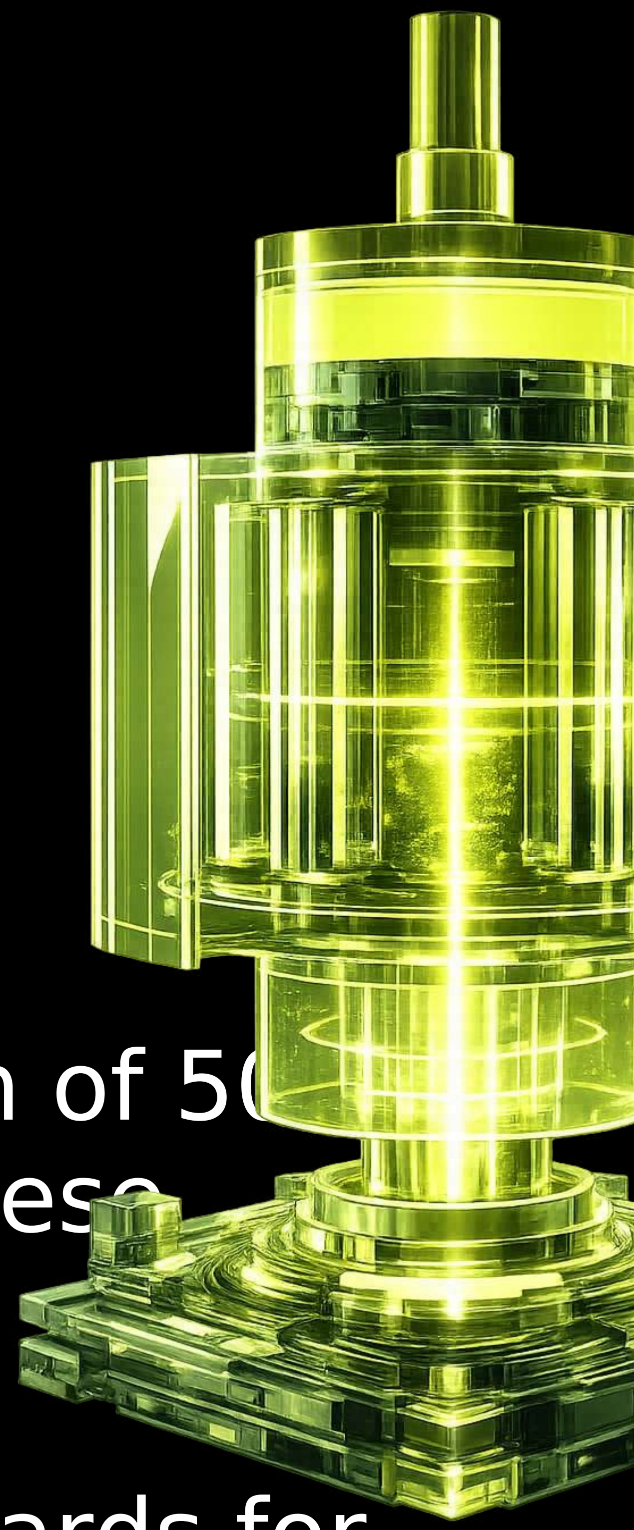
Revenue Sharing Model

Your Volume Bonus from CEX for $5M	-	Kyrr.io Execution Fee for $5M Volume	=	**Your Revenue**
eg. $400	-	$300	=	**$100**



Participants are required to share their exchange referral links that provide a minimum of 50 trading fee discount. Trade execution engine then generate trading volume through these links.

Any volume-based bonuses or incentives granted by the exchange (e.g. milestone rewards for reaching certain trading volumes) belong entirely to the participant.
